Passage® Desking System

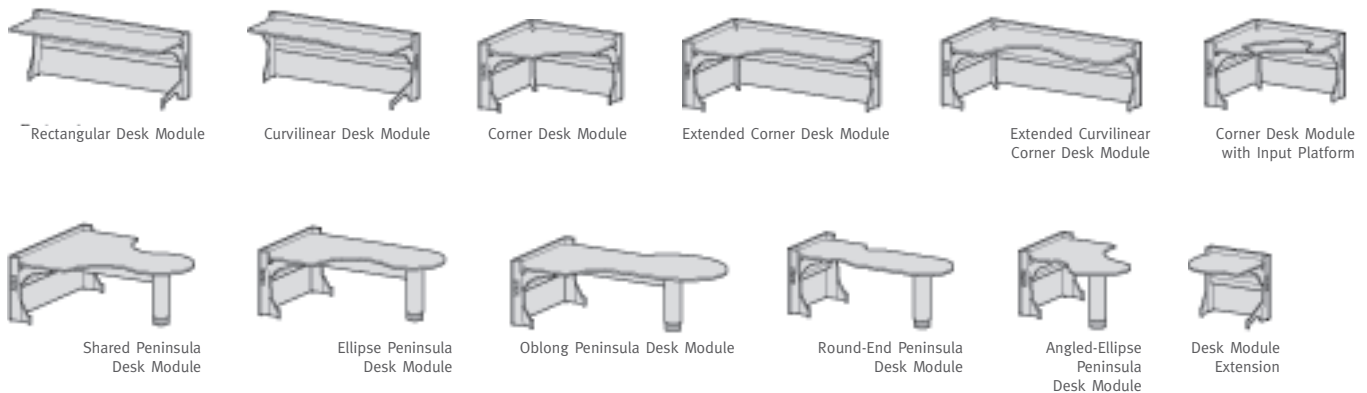

AN EVERYWHERE PERFORMER

Combining individual strengths can yield a powerful result. With the Passage desking system, Herman Miller builds systems capabilities into freestanding furniture to create one versatile performer. Passage workstations are composed of preassembled, freestanding modular units that are easy to specify, order, and install. Passage also works like a system, with advanced technology integration and comprehensive storage options. By blending the advantages of freestanding and systems furniture, Passage works equally well in enclosed offices and in open spaces, for individuals and for teams.

MOBILE AND ADJUSTABLE

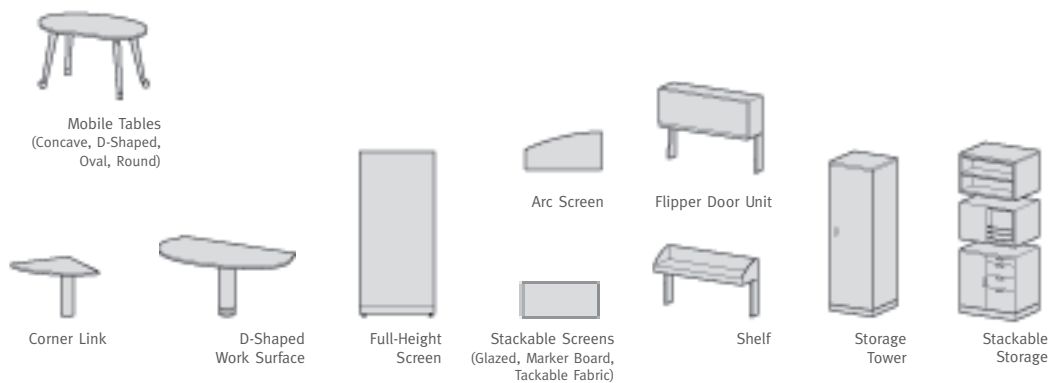

Desk modules, including peninsulas, can be ordered with a work surface height-adjustment range of 26 to 31 inches at 1-inch height increments. The legs on oval, concave, and D-shaped mobile tables are adjustable from 26 to 31 inches. Work surfaces on Passage desk modules come in a number of curved shapes with rounded edges. Put together, the modules form distinctive workstation designs. Surfaces have either a laminate top and vinyl edge or a veneer top and wood composite edge. The extensive color offering includes 58 paints, 33 laminates, and 6 veneers.

MODULAR FLEXIBILITY

A workstation starts with an arrangement of fully assembled desk modules, which are composed of work surfaces, legs, stanchions, energy and cable management, and back panels. Back panels are available in three heights to allow various levels of privacy and access to outlets. Screens, storage, and other components are added to suit the worker, task, and application. Since workstations don't rely on panels, walls, or other workstations for support, reconfiguration doesn't disrupt people working nearby.

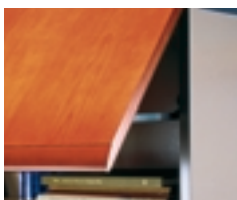

PRIVACY UNDER CONTROL

Screens attach to desk modules for seated privacy. For standing privacy, screens can be stacked. They can also be added or removed without affecting any other part of the workstation. Arc-shaped screens complement the curves of work surfaces. Full-height screens can be linked together to create a conference area or increase enclosure in a workstation.

STORAGE FROM THE TOP DOWN

Flipper door units and shelves make use of vertical space in small-footprint workstations. Lighter weight, soft-closing doors are available. A tool rail or shelf attaches to the work surface so people can personalize their spaces and control clutter. Meridian® freestanding filing and storage products—including stackable storage cabinets, pedestals, laterals, and storage towers—are also part of the Passage line. Tops and bases of various heights let Meridian products match up evenly with Passage components or fit snugly under desk modules.

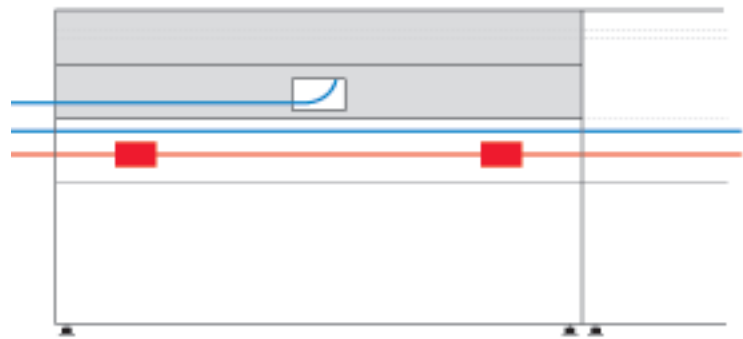

HIGH-CAPACITY POWER AND DATA

Three easy-to-access horizontal raceways in desk modules manage energy and cables below the work surface. The top channel holds cords routed from the work surface, so there are no grommets. The primary cable channel in the middle is a continuous, grounded metal barrier that holds up to 80 Category 5 cables. The bottom channel holds the power harness.

Powered desk modules come with the power harness already installed. Back panels, available in three heights, can be easily removed to access utility raceways from the aisle side.

The 4-circuit, 8-wire system supports heavy computer use and handles multiple specialized circuits for sensitive equipment. Power entering a building from a single point can feed multiple workstations.

Most desk module styles have two duplex receptacles under the work surface. Corner and extended corner desk modules have four duplex receptacles. Receptacles are also available at work surface height. An electrical distributor and a voice/data outlet can be attached to the work surface for easy power and data access.

DISTRIBUTION PATHS: POWER ■ DATA ■

12-YEAR, 3-SHIFT WARRANTY

Like all Herman Miller products, the Passage desking system is durable for long-term performance and value. As a statement of our confidence in its quality, Passage is covered by the Herman Miller Warranty—a straightforward promise that we stand behind that quality 100 percent. The 12-year, 3-shift warranty covers all standard elements and includes labor on all warranty work.
